

From federal opportunity to a clear team next step.

PRODUCT CAPABILITY BRIEF | SEPTEMBER 17, 2026

Independent opportunity-review software for small federal-contracting teams. Bring profile-based prioritization and shared follow-up around public SAM.gov-derived notices into one practical workspace.

REVIEW / ASSIGN / FOLLOW THROUGH

Focus the review. Search and filter imported notices using your company profile. Read match reasons and open official sources; scores do not determine eligibility.

Coordinate the next step. Keep company review statuses, assignments, next actions and internal due dates together. Personal watchlists, alerts and digest preferences remain personal.

Organize working material. Use a private company document library with categories, opportunity links and review dates. Upload only ordinary, non-sensitive material your organization permits.

Review recorded source changes. An in-app queue shows meaningful changes recorded during SAM imports for tracked notices. Official notices and source documents remain authoritative.

SCOPE AND DATA HANDLING

Public discovery is SAM.gov-only. Team-added opportunities are private, unscored and not scraped or automatically monitored. Imports refresh periodically and may be delayed or incomplete. Change tracking does not inspect attachment contents or detect files replaced at the same URL.

Do not upload classified information, CUI, export-controlled material, source-selection information, credentials or sensitive personal data. This brief does not assert FedRAMP, CMMC, SOC 2, NIST conformity, vendor registration, contract vehicles or government authorization.

EVALUATE THE WORKFLOW

Save a company profile, review a notice at its official source, assign follow-up and return to your team queue. Use the public product example before evaluating with your own permitted business material.
